COMMENTS ONSTATEMENT OF REASONS FOR ALLOWANCE

Sir:

In light of the Notice of Allowance dated August 11, 2006, and the Examiner's Statement of Reasons for Allowance enclosed therewith, applicants respectfully submit the following comments:

COMMENTS

The Examiner indicated that the teaching of Budge et al. (US 5,196,602) was considered to be the closest prior art, and stated that the reference differed from the claimed invention in not having CuO as part of the catalyst system, and in not having an oxide for support. For clarification the following is respectfully noted.

Budge et al. address a procedure in which maleic anhydride is hydrogenated to produce 1,4-butanediol in two stages.

The first stage of the prior art procedure entails a hydrogenation of maleic anhydride to succinic acid and/or gamma-butyrolactone¹⁾ which is conducted in the presence of "any hydrogenation catalysts which will effect the conversion ... Representative of suitable cata-

lysts are copper chromite, Pd/Al₂O₃, Pd on carbon support, or mixed oxide catalysts comprising copper, zinc and aluminum.²⁾

The second stage of the prior art procedure in which the succinic acid and/or gamma-butyrolactone is hydrogenated to 1,4-butanediol³⁾ is conducted in the presence of a specific ruthenium-containing catalyst,⁴⁾ which contains in addition to ruthenium certain amounts of:⁵⁾

- at least one nickel and palladium;
- at least one of iron, cobalt, rhodium, osmium, iridium and platinum, and
- at least one of zinc and cadmium,

in the form of oxides but does not comprise CuO. It may, however, be supported or unsupported.⁶⁾

Please charge any shortage in fees due in connection with the filing of this paper, including Extension of Time fees, to Deposit Account No. 14.1437. Please credit any excess fees to such deposit account.
